

NuPoint Core Proposal for

Liberty Capital & Texas Heritage (COMBINED)

Addison, TX

December 16, 2024

Prepared by

Robert Berryman

The information contained in or supplied with this document is submitted solely for the purpose of evaluating the products and services of Computer Services, Inc. (CSI), and/or its affiliates and subsidiaries ("CSI"). The information contained in or supplied with this document, in its entirety, is the confidential and proprietary information of CSI. It may not be copied by or disclosed to any person or entity other than to the intended recipient, without the prior written consent of CSI.

This proposal is neither an offer nor intended by CSI, upon acceptance by the intended recipient, or otherwise, to create a binding agreement with CSI. Such an agreement shall be reflected only by a definitive contract, executed by both parties.

Pricing Proposal: 7 - Year Term

NuPoint Pricing Details:

Pricing is confidential and may not be disclosed outside of its intended recipient
Pricing will remain valid for a period of 90 days from time of presentment
Pricing is subject to change based on changes to volume, annual increases, etc.
Proposal is an estimate based on the information provided
Tax and shipping charges are not included on this proposal
A card reissuance may be required based on Q&A with CSI's product management
Fixed annual increase of 5.25%

CSI One-Time Fee:	\$ 261,102
Equipment Fees:	\$ 76,933
Credit for One-Time Fees:	(\$338,034)
Special Incentive Billing Credit:	(\$375,000)
Total One-Time Fees:	\$ (375,000)

CSI Fees Included in Organic Growth Based Pricing:	\$ 38,663
Other Processing Fees:	\$ 12,734
Monthly Equipment Fees:	\$ 250
Total Monthly to CSI:	\$ 51,648

CSI Annual Forms & Statements:	\$ 2,044
---	-----------------

Highlights of CSI Proposed Core Routine Services

Core Data & EFT

Transaction Deposits, Time Deposits, Loan Core Processing, Optional Loan Services, General Ledger, Online Services, Central Information File, Online Miscellaneous, Check Imaging, Teller Capture, Statement & Notice Rendering, Miscellaneous Image Processing, Document Imaging & Report Archival, New Account Opening, 3rd Party Interfaces, Digital EFT Solutions, Card Fulfillment, Fraud Mitigation

Digital Services

Digital Banking Spanish Translate, External Transfers (A2A), Out of Band Authentication (OOBA), Text Messages, Voice, CSI Mobile Banking Solution, Design Pro Web Site Design and Hosting, Telephone Banking, Data Backup & Device Encryption

Business Intelligence

Business Intelligence Tools, CSI CRM - Contact Management, CSI CRM - Relationship, CSI CRM - Case and Workflow Management, CSI CRM - Campaign Management, CSI CRM - Sales and Referral Tracking, FMS Margin Manager, FMS Profit Performer, Financial Dashboard, NuPoint Transaction Manager (Paperless Ticketing), Loan Relationship Pricing, Accounts Payable, Fixed Assets

Additional CSI Products/Services demonstrated but not included in current fees

(Please see Details sections below)

Organic Growth Based Pricing Details:

MPLS, CSINet, and Managed I.T. Services are not included and are provided as a separate proposal from CSI Managed Services.

Travel Expenses Not to Exceed \$65,000

NXTsoft Annual Maintenance Fee is not included.

Exclusions (as below and noted throughout individual pricing pages):

- Professional Services/One Time Fees
- Third Party Products Provided By CSI (e.g. Bill Payment)
- Pass-through Charges (e.g. Postage, Telecommunications, EFT)
- Equipment

Standards and Best Practices

CSI Implementations
3901 Technology Drive
Paducah, KY 42001

*** TO BE FULLY UNDERSTOOD PRIOR TO CONVERSION ***

We at CSI strive to provide you with the best possible conversion experience, not only for you but also your customers. To assist in the quality of your migration to NuPoint we have developed and implemented proven standards and best practices. These standards and best practices help ensure your data is mapped accurately and NuPoint is configured for optimal efficiency and utilization. In addition to the items noted below, we will look to move your data as is with minimal changes during the conversion process. We also recommend that you avoid making changes to your current configuration and product offerings throughout the course of the project.

The Important information listed below is to better prepare your teams before their engagement with CSI's implementation specialists. The better we understand your financial institution and you understand our implementations processes the more expedited and targeted our interactions can be throughout the project. The key to a successful implementation and partnership is alignment and communication.

To accelerate your adaptation and comprehension of NuPoint's features and functionality, we recommend our banks only target product or system configuration changes that are essential for business success within the 90 days post conversion. Other non-essential changes should be planned after this period.

Key File Delivery Timelines

It is key to the success of the project that all file delivery dates be met. Delays in obtaining files may negatively impact the project or the banks' ability to train and complete data validation.

Core Vendor Test Files – First Set	225 – 210 Days Prior to Conversion Date
Core Vendor Test Files – Second Set (If Required)	70 – 60 Days Prior to Conversion Date
Internet Banking Test Files	240 – 200 Days Prior to Conversion Date
Bill Pay Test Files	120 – 90 Days Prior to Conversion Date
Card Files – Test CAF	180 – 120 Days Prior to Conversion Date
Card Files – Final CAF	28 – 7 Days Prior to Conversion Date

**Note: Core, Internet Banking, and Bill Pay Test Files will require a live set of files at conversion.*

Standards and Best Practices

For CSI to be able to convert the data per the standards, the data must be present in the deconversion files received from the prior vendor. If data is not present, CSI will inform the bank.

TDA	• End of Year Reporting for Distributions and Contributions: - o Will only report Distributions for the Tax Year of the conversion. - o Will only report Contributions for Prior Year if the conversion is prior to the tax deadline. • CD activity will not be converted. • IRA monetary activity will convert only for tax reportable year(s). • Officer/CSR codes or initials should be cleaned up prior to the first test file pull. - o Officer/CSR Initials will convert as is, those greater than 3 characters will be programmatically changed.
NuFund	• This process is a post-conversion implementation, typically starting 90 days or later after conversion.
Loans	• CSI NuPoint loan account numbers consist of two parts: An 8-digit Borrower Number and a 5-digit Note Number (each part may have leading zero's). For account number conversion, we will move the rightmost 8 positions of your current loan account number to the Borrower # with the Note # = 00010 for each loan account. • Loans that are closed and have been paid out more than 5 years will not be converted. A list of these loans will be provided. • Risk Management System (RMS) If purchased, notes in the current system for open loans can be moved. Notes are not moved for closed loans but the note and note date will be. • Collateral Valuation System (CVS) If purchased, is a post conversion project. The detail and complexity of this product does not allow us to convert data into the system. • Consumer Revolving Credit loans (RVC) produce billing statements. The standard for all other loans is billing notices. • Loan history is converted on open/active loans for your convenience only. Converted loan history should not be considered the legal history on the note. Closed loan history is not converted. Loans closed within the last 60 days of conversion may have history converted. • Credit Bureau Reporting for consumer accounts Experian/TRW, Innovis, Trans Union and Equifax are available. Commercial and/or SBA reporting we support Dunn & Bradstreet, Experian, and Equifax. The first reporting will occur after the first full month on CSI NuPoint.

Standards and Best Practices

For CSI to be able to convert the data per the standards, the data must be present in the deconversion files received from the prior vendor. If data is not present, CSI will inform the bank.

CIF Names	• Converted from the current processor CIF Name • Individual Names convert as LAST NAME, FIRST NAME, MI • Non-individual Names convert as is. • Alternate Names are not converted. • DBA CIF Profiles will be created in the conversion whether they are a title line or have their own CIF Profile on current processor. • Name titling such as CUSTODIAN, REP PAYEE, TRUSTEE converts with title behind the name at the account level Name Line. The Name title will not be part of the CIF Profile. • POD Name titles are not converted. • Tax reporting Entity is converted to Name Line 1 on accounts. • Data that converts on the Account Name Lines will print on statements and notices.
CIF Addresses	• Physical Address (if available to convert from current processor fields) is converted to the CIF Profile Address Lines • Mailing Address is converted to the Account Address lines. • Alternate Address types, Alternate/Seasonal, Additional Statement, and IRS Address (for EOY tax documents) are converted to Account level only. Alternate addresses are not available at the CIF level. • Non-address text does not convert to an Address line (example: a Customer Name, an Account Title) • Data that converts on Account Address Lines will print on statements and notices.
CIF Relationship Codes	• Indirect Relationships are not converted on Closed accounts. • Relationship Codes designate Name Titles (see bullet #4 under Names Conversion section) • Only one account relationship is converted per customer, per account.
CIF Additional Fields	• One form of customer Identification is converted. • Cell phone converts first as the customer Primary phone number unless current processor has a Primary phone indicator. • CIP value is converted as "Certified Prior to conversion" unless there are specific CIP values in the current processor CIF file. • Customers converting without a TIN number will be assigned a TIN Certification Code of "Not Certified." • Other CIF fields may be converted if there are values in the CIF file from their current processor. • Officer/CSR Initials will convert as is, those greater than 3 characters will be programmatically changed.
FMS	• If converting from a core vendor, we will convert the current year and prior year end of month balances including averages. Net change and aggregates are calculated and loaded as well. • If converting from a third-party vendor and the third-party vendor will continue to be used post conversion, we will convert a current balance only. Current balance is defined as the balance on the day of conversion. This will be the starting balance. Historical data is not necessary when a third-party program will be the official general ledger record. • We do not convert FMS transactional activity. We will provide the FMS Transaction activity to NXTSoft (if contracted) for conversion into their platform if the information is received from the vendor from whom we are converting. • Standard Call Report Download spec options will be applied. • A standard set of Balance Sheets and Income Statements will be set up by the department and consolidated. These will archive both daily and monthly. Additional reports can be set up at the bank's request or post-conversion by bank personnel. • Standing Journal entries (recurring GL to GL transactions) are not converted. • Recurring Batches (GL to GL batches) are not converted. • Budget is not converted.
FMS Third Party Extracts	• During the conversion process, we will provide a solution for your current third-party vendors to obtain core data to the best of our ability.
Transfers	• Customer related recurring transfers set up on the current (old) core vendor will be converted into the NuPoint transfer system. • All recurring transfers will be examined to determine if there are any items that cannot be converted. If items are found, a reason will be provided per transfer and given to the bank for review. • Payment type transfers that can be properly identified and accommodated, will move to their respective application within the NuPoint system. This includes Loan Payments, SDB Payments, and TDA Interest Payments. • ACH transfers, both debits and credits, will also be converted with their necessary ACH Origination information. • Standing Journal entries (recurring GL to GL transactions) are not converted. This is a post conversion training item to allow bank personnel to become more comfortable utilizing the FMS system.

Standards and Best Practices

For CSI to be able to convert the data per the standards, the data must be present in the deconversion files received from the prior vendor. If data is not present, CSI will inform the bank.

DDA - Savings

- We will combine similar grandfathered products.
 - All interest will be paid at deconversion. This will include any type of club account.
 - Exception interest rates will be maintained at the account level, not through rate parameters.
 - All statements will be cut, and a paper statement will be generated at deconversion. Accounts will convert as a digital statement if coded the same on the current processor. This ensures the final statement is provided in a timely manner. The delivery of digital statements from your current processor can be delayed at deconversion.
 - Any type of reward product will qualify for a higher rate of interest at deconversion. Reward products, excluding Kasasa, will auto-qualify the first statement cycle post-conversion for any additional rewards, i.e., surcharge reimbursement.
 - The first cycle to cut post-conversion will not be service charged. It is recommended service charges not be assessed for 30-days post-conversion.
 - DDA Statement Cycles will be combined into two to four cycles. EOM will convert as is. Personal cycles typically convert as 05, 10, 15 or 20.
 - Cycles are not cut during the first-week post-conversion. An exception will be made as needed for an End of Month cut.
 - Officer/CSR Initials will convert as is, those greater than 3 characters will be programmatically changed.
 - All closed accounts received in the live files will be converted.
 - If an Inactive Status is only utilized on the current core for pre-dormancy notification, this feature will not be brought forward into NuPoint.
 - Account types, i.e., personal, commercial, public funds, will convert into predefined type codes.
 - If IntraFi or Reich & Tang are processed manually on the current provider, they will convert the same. If the bank desires automated integration, it will need to be post-conversion based on scheduling availability.
 - Products will be developed based on the TISA and product configuration documents provided by the bank.
 - Similar legacy or grandfathered products will be combined.
 - Email address will convert from either the CIF or application, when available.
 - Dormant account status will convert based on the account's most current customer-initiated transaction to align to NuPoint processing. The date of last contact will be converted, if available, to be utilized to identify accounts for escheatment.
 - Historical statements may be converted for all accounts from your current vendor for Digital display. In NuPoint, statements begin building for Digital viewing when an account is coded for a Digital Statement. For accounts that convert as a paper statement and change to Digital Statement after accepting the E-sign post-conversion there will be a gap in the statements that are viewable in Digital between the conversion date and the date the first Digital Statement is generated.
- Note: if on your current system, all customers who have internet access can view an electronic statement without accepting the e-sign agreement, i.e., customers receive a paper statement but can view a formatted statement in Digital Banking, they will be unable to view digital statements until the E-sign has been accepted.

Standards and Best Practices

For CSI to be able to convert the data per the standards, the data must be present in the deconversion files received from the prior vendor. If data is not present, CSI will inform the bank.

Card

Mass Reissue of Cards Project: - CSI Recommendation

- CSI will generate Card Keys and meet all up-to-date security compliance requirements for PVK, CVK and EMV.
- This ensures Contactless EMV cards work across all merchant devices.
- Secures Card programs by issuing randomized card numbers for fraud deterrence.
- Prepares the bank's card programs for 8-digit BIN migration.
- Updates bank information on the back of the cards.
- Leverage marketing and new technology for the upgrade to Contactless EMV cards.
- Reduces dependency on Deconversion PM when they are assigned 60 days ahead of conversion.
- CSI recommends this method to reduce dependency on Deconversion PMs when the outgoing EFT processor assigns them less than 120 days ahead of conversion.

Conversion of Existing Cards Project:

- The bank must own their BINs, or the existing BINs must be transferable to CSI.
- Test Card File must be delivered to CSI 150 days ahead of the conversion.
- The bank must create and deliver a set of Test Cards to CSI per BIN and per method of issuance 150 days ahead of conversion.
- The bank must meet all Visa or Mastercard requirements to start the BIN transfer process to CSI by 135 days ahead of conversion.
- The bank must deliver Card Keys for a complete evaluation 135 days ahead of conversion.

EFT Networks Supported:

- Visa, Plus, PAVD
- Mastercard, Cirrus, Maestro (required for De Novo)
- Pulse (Primary Gateway Selection)
- NYCE (Secondary Gateway Selection)
- Shazam (Iowa Banks Only)
- Star (does not include Star Access)
- *Other networks, including surcharge free options, are available through the Gateway provider selected.*
